DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4, 10-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeVaun (6,715,879) and known state of the art .

Claim 1 recites a conventional LCD type projector with the exception of the relative orientation of the light emitted from the projector to the screen. LCD projectors utilize LC cells sandwiched by polarizers for emitting a polarized light image. Since the claims lack any particular structure of the screen means it is deemed that the claim limitations are met by a conventional projector because a screen clearly could be oriented such that a long dimension is vertical or such that a short dimension is vertical depending upon how one wishes to display an image. Three color projectors are old and well known

DeVaun discloses a projector wherein the direction of polarization of the light from such a known LCD projector (1) may be rotated through any desired direction, which clearly would encompass longitudinal directions. Screen (2) includes Fresnel (8) and diffusive (9) portions.

3. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over deVaán as applied to claim 1 above, and further in view of Shikama.

DeVaán and the known art discloses the invention substantially as claimed but does not specify the particular projection system.

Shikama teaches bending of the projection path.

It would have been obvious to one skilled in the art to modify the device of DeVaán for use with any known optical arrangement, such as taught by Shikama, in order to reduce the structure by bending the optical path.
